6.0 BACKFILLING AROUND DUCTS, PIPES OR CABLES

Prior to backfill operations, all loose rubbish and foreign material should be removed from the trenches.

Sand backfill should be placed around the ducts, pipes or cables and compacted by mechanical means or by watering in.

7.0 TRENCH BACKFILLING

Trenches must be backfilled with limestone and compacted in layers not more than 150mm thick with mechanical rammers to 95% Modified Density, in accordance with AS1289.

8.0 PAVING REINSTATEMENT

OPTION 1:

The applicant may reinstate the granite pavers for all excavations to comply with the details shown in this specification, (see page 3 of this Design and Construction Note 10.1), and to the satisfaction of the City of Perth Construction Supervisor. If any of the pavers have been damaged, they are to be replaced with new pavers at cost to the applicant.

All work associated with the reinstatement of the pavers should comply with the requirements specified on page 3 of this Design and Construction Note 10.1

OPTION 2:

If the City of Perth Work and Services Unit is to reinstate the granite pavers, the applicant shall pay the cost of the works as per a quote from the Construction Supervisor prior to commencement of the reinstatement works.

9.0 MAINTENANCE PERIOD

The applicant is responsible for the cost of any maintenance of the reinstatement works for a period of 12 months from completion, to a standard that is acceptable to the City of Perth, if the reinstatement is carried out by the applicant.

Where the applicant is required to undertake additional works due to a defect occurring during the maintenance period, the maintenance shall be extended for 3 months from when the Manager, Work and Services is notified of the completion of the additional works or to the end of the original maintenance period, whichever is longer.
